A “How-To” Guide for Pharmacies to Become Collection Sites for Unused and Unwanted Prescription Medication
Introduction

Why should pharmacies become collectors of unused medications?

According to the Oregon Health Authority:

Oregon has one of the highest rates of prescription opioid misuse in the nation.

In Oregon, more drug poisoning deaths involve prescription opioids than any other type of drug, including alcohol, methamphetamines, heroin and cocaine. An average of 3 Oregonians die every week from prescription opioid overdose, and many more develop opioid use disorder.

Pharmacists play an important role in patient health, from advising patients on medications to blood pressure screenings and flu shots. According to a 2016 survey of LA county residents, 87% of respondents said they thought drop bins for medicines and sharps in pharmacies were a good idea.

Become committed to being part of the solution to this problem. It’s the right thing to do for customers and patients.

Help protect the health of customers and patients from unused drugs by installing a drug disposal receptacle in your pharmacy. Customers and the community will thank you.

Step-by-Step Plan

1. Modify DEA registration to become authorized collector and list locations of collection receptacles.
2. Choose disposal service and order receptacle.
3. Two pharmacy employees** install the inner liner and both sign the step log.
4. The pharmacy can direct customers to the collection receptacle and discuss medication usage. BUT
   - The inner liner must meet DEA specifications. Most disposal companies offer DEA liners as part of their disposal service.
5. Only Schedule II-IV controlled and non-controlled substances are accepted.
   - No Schedule I drugs accepted.
   - Do not place pharmacy inventory drugs in the receptacle.
   - Drop Door must be locked when employee isn’t present.
6. Once placed in the collection receptacle, drugs are not to be counted, sorted, or handled in any way.
7. Once receptacle liner is full, two pharmacy employees remove, seal, and package the liner immediately upon removal without emptying or touching the contents.
   - Both employees sign a log.
   - Liner may be stored by two employees in a securely locked, substantially constructed cabinet or securely locked room with restricted access. If no such space is available, call collector before container is full and remove liner as above when collector arrives.
8. Two authorized employees provide packaged inner liner to carrier.

Costs vary by amount collected, frequency of disposal, and type of contract.

Costs range from $800-$2000 annually

Costs Include:

- purchase or lease of receptacle
- liners
- shipping
- disposal

COSTS INCLUDE:

- purchase or lease of receptacle
- liners
- shipping
- disposal

Costs range from $800-$2000 annually
